Equipment Hire, Supply, Inspection
& Testing, Training & QA/QC Services,
Drilling Equipment Inspection and Certification

Global Lifting Services Nigeria Limited (GLSN) was incorporated in May 2002 to provide international standard services in lifting equipment inspection, testing and certification as well as lifting equipment supplies.

Global Lifting Services Nigeria limited started as an offshoot of Global Lifting Services Limited, Aberdeen in the UK now 'First Integrated Solutions Ltd UK.' which has been in similar business since 1979. Global Lifting Services Nigeria has a management team of over hundred years combined experience in the lifting equipment industry. Global Nigeria now 100% Nigerian is a household name within the oil & gas sector in Nigeria and indeed Africa.

As part of its philosophy, GLSN maintains a flat management structure using well qualified duly certified personnel each capable of fast and effective decision-making. This structure has led to an excellent customer satisfaction record, with Global Lifting Services Nigeria having the reputation for providing rapid, dynamic, excellent and quality service delivery systems. Mindful of the safety-critical nature of our business, very high emphasis is placed on the meticulous design of test / examination processes and procedures. Our business processes and procedures ensure that all human, material, IT and financial resources are used in an efficient and environmentally friendly manner to ensure that teamwork, excellence and continuous improvement practices are consistently achieved.

Quality Management: Our quality management systems focus on customer satisfaction, through in-depth understanding of the customers' lifting gear needs and best practices. We plan, follow through and regularly review all assignments to identify opportunities for service quality improvements.

Awards and Recognition: Global Lifting Services Nigeria's quality management system has been approved by NIS SON 9001:2015 covering a range of Lifting services including inspection, maintenance, test and manufacture.

Mission: *To provide world class & environmentally friendly lifting equipment inspection services and supplies to protect life and property. To exceed our customers' expectations in quality, delivery and cost through continuous improvement and customer interaction. We provide work environments where our employees can meet their potential and thrive in an atmosphere of excellence. We strive to be the industry standard in service to customers. We maintain a superior level of integrity in interactions with business partners and associates.*

... lifting equipment hire, supply, testing

Inspection and Testing

Personnel involved in our operations and inspections are all qualified and competent professionals. Most of them are qualified in Non Destructive Testing and certified by Lifting Equipment Engineers Association – LEEA.

All our engineers have been given specialized external and internal training and are continually assessed. This provides objective evidence that they are competent to perform the duties required of them.

All Tests and Inspections are carried out in strict accordance with approved company procedures. These can be reviewed and audited by the client prior to any work being carried out.

Our Inspection Teams are provided with laptops to record the results of their inspections.

On completion of any inspection job, the report is provided in hard copy or PDF format, prior to the engineers leaving the site. In addition, within 48 hours of their return to base, all reports and certificates are posted to the internet for download by the client.

Global Lifting Services Nigeria offers a full range of on site lifting equipment inspection and LOLER testing services to ensure that lifting gears adhere to strict industry LOLER regulations. Such services prolong the lifetime of lifting equipment and minimize the inconvenience and costliness of downtime. Our fully qualified engineers are experienced and qualified to carry out the statutory lifting equipment examinations of all types of lifting gear and provide the mandatory test certification.

Certification

Global Lifting Services Nigeria have developed in-house database to control and maintain on an on-going basis, the certification and register of all lifting equipment, both fixed and portable, in use on all installations and sites.

An individual database can be created for any Client Company if desired and broken down into separate installations, departments, SBU's and sites.

A record will be raised for every item of lifting equipment of each site, department or as discussed/agreed. This will be done manually after the first inspection or if currently operating in a system, it may be possible to import the data electronically.

Once the records have been entered for the individual sites or departments, Global Lifting Services Nigeria will initiate a live test certificate file.

Global Lifting Services Nigeria ensures the live certificate file is maintained and all obsolete certificates are transferred to dead certificate file. These certificates are held for a minimum of two (2) years.

Global Lifting Services Nigeria can also provide many other reports ranging from analysis of defects found in equipment over a period of four surveys, to identifying trends and suitability of types of equipment, to print out types, size and make of equipment. We also provide a facility whereby all reports and certificates can be electronically transferred thereby reducing delays from the time the work was carried out to the time the completed report is received.

Drilling Equipment Inspection

Personnel involved in our operations and inspections are all qualified and competent professionals. All of them are trained in at least one or more Non Destructive Testing techniques.

Handling Tools: There are several different types of handling tools which Global Lifting Services Nigeria can inspect: Drilling Elevators, Rotary Slips, Tongs, Safety Clamps, Elevator Links, and many more.

Bottom Hole Assembly: There are many different types of BHA which Global Lifting Services Nigeria can inspect, these include Rotary Subs, Stabilizers, Fishing Tools, Pup Joints, client special tools and many more.

Types of Inspection: Thread Inspection, Dimensional Inspection, Visual Inspection, Magnetic Particle, Liquid Dye Penetrant, Ultrasonic Wall Thickness.

All our engineers have been given specialized external and internal training and are continually assessed. This provides objective evidence that they are competent to perform the duties required of them.

On completion of the inspection the reports are provided in hard copy or PDF format, prior to the engineers leaving the site. In addition, within 48 hours of their return to base, all reports and certificates are posted to the internet for download by the client.

Global Lifting Services Nigeria offer a full range of onsite Drilling equipment inspection and testing services to ensure that the equipment adhere to industry regulations. Such services prolong the lifetime of equipment and minimize the inconvenience and costliness of downtime. Our fully qualified engineers are experienced and qualified to carry out all your inspection requirements.

Rope Access Inspection: Upon request, Global Lifting Services Nigeria provides Rope Access Inspection.

Provision of Quality Control / Quality Assurance (QA/QC) Personnel: On request, Global Lifting Services Nigeria engineers are deployed to client's site to confirm lifting procedures, pre-mobilization of lifting equipment, or any other conformance checks on lifting equipment.

Our staff are fully trained in the inspection, service and repair of lifting equipment including Chain Hoists, Slings, Eyebolts, D Shackles, Polyester Slings etc. Every item supplied, repaired or tested by Global Lifting Services Nigeria is dispatched with a traceable test certificate detailing the exact specifications, working load limit and proof load applicable to the product.

Training offered by Global Lifting are beneficial to both the Clients' businesses and to their employees. The benefits include increased efficiency, productivity, increased morale, motivation and job satisfaction.

Manufacturing

Global Lifting Services Nigeria manufactures Wire Rope Sling Assemblies from 2mm through to 52mm in both Aluminum Ferrules and Steel Sleeves. Our riggers are skilled in all types of hand splicing for both wire and fibre rope and socketing using resin and zinc. We manufacture and supply **bolts and nuts** and **fasteners** of different sizes. Global Lifting Services Nigeria is one of the few companies worldwide to have obtained the DNV type approval for its manufacturing processes.

Equipment Hire

Global Lifting Services Nigeria collaborates with global leaders in the design, manufacture and hire of lifting equipment and marine deck machinery for the offshore oil and gas, marine, and renewable energy markets.

Global Lifting Services Nigeria have reliable, modern and well maintained portable lifting equipment available for hire, either on an ad-hoc basis or as full Rigging Lofts suitable for 6 monthly change outs on platforms or rigs.

On return from hire each item is passed through our refurbishment process where it is fully stripped, rebuilt and tested prior to being returned to the shelf.

A fully computerized maintenance history is kept for all our equipment thus, ensuring that every item dispatched from our works goes out in a 'as new condition'.
